Art Unit: 3623

DETAILED ACTION

This Non-Final office action is responsive to the communication received on March 12,
 Claims 1-14 are pending in the application.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns,"

"The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01.

Art Unit: 3623

The preamble of claims 1 and 8 recites a method and system for adjusting a rating score of a rating group of consumers for an individual media property. However, the body of the claims does not recite any score being adjusted.

Claims 2-7, and 9-14 depend from claims 1 and 8; and are therefore similarly rejected

5. Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 8 recite "creating a profitability index..... It is unclear as to how the profitability index is created. Applicant is suggested to amend the claims to recite how the profitability index is created.

Claims 2-7, and 9-14 depend from claims 1 and 8; and are therefore similarly rejected

Claim Rejections - 35 USC § 101

- 6. 35 U.S.C. 101 reads as follows:
 - Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
- 7. Claims 1-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As an initial matter, the United States Constitution under Art. I, §8, cl. 8 gave

Congress the power to "[p] romote the progress of science and useful arts, by securing for

limited times to authors and inventors the exclusive right to their respective writings and

Art Unit: 3623

discoveries". In carrying out this power, Congress authorized under 35 U.S.C. §101 a grant of a patent to "[w]hoever invents or discovers any new and useful process, machine, manufacture, or composition or matter, or any new and useful improvement thereof."

Therefore, a fundamental premise is that a patent is a statutorily created vehicle for Congress to confer an exclusive right to the inventors for "inventions" that promote the progress of "science and the useful arts". The phrase "technological arts" has been created and used by the courts to offer another view of the term "useful arts". See In re Musgrave, 167 USPQ (BNA) 280 (CCPA 1970). Hence, the first test of whether an invention is eligible for a patent is to determine if the invention is within the "technological arts".

Further, despite the express language of §101, several judicially created exceptions have been established to exclude certain subject matter as being patentable subject matter covered by §101. These exceptions include "laws of nature", "natural phenomena", and "abstract ideas". See Diamond v. Diehr, 450, U.S. 175, 185, 209 USPQ (BNA) 1, 7 (1981). However, courts have found that even if an invention incorporates abstract ideas, such as mathematical algorithms, the invention may nevertheless be statutory subject matter if the invention as a whole produces a "useful, concrete and tangible result." See State Street Bank & Trust Co. v. Signature Financial Group, Inc. 149 F.3d 1368, 1973, 47 USPQ2d (BNA) 1596 (Fed. Cir. 1998).

This "two prong" test was evident when the Court of Customs and Patent Appeals (CCPA) decided an appeal from the Board of Patent Appeals and Interferences (BPAI).

See In re Toma, 197 USPQ (BNA) 852 (CCPA 1978). In Toma, the court held that the

Art Unit: 3623

recited mathematical algorithm did not render the claim as a whole non-statutory using the Freeman-Walter-Abele test as applied to Gottschalk v. Benson, 409 U.S. 63, 175 USPQ (BNA) 673 (1972). Additionally, the court decided separately on the issue of the "technological arts". The court developed a "technological arts" analysis:

The "technological" or "useful" arts inquiry must focus on whether the claimed subject matter...is statutory, not on whether the product of the claimed subject matter...is statutory, not on whether the prior art which the claimed subject matter purports to replace...is statutory, and not on whether the claimed subject matter is presently perceived to be an improvement over the prior art, e.g., whether it "enhances" the operation of a machine. In re Toma at 857.

In Toma, the claimed invention was a computer program for translating a source human language (e.g., Russian) into a target human language (e.g., English). The court found that the claimed computer implemented process was within the "technological art" because the claimed invention was an operation being performed by a computer within a computer.

The decision in State Street Bank & Trust Co. v. Signature Financial Group, Inc. never addressed this prong of the test. In State Street Bank & Trust Co., the court found that the "mathematical exception" using the Freeman-Walter-Abele test has little, if any, application to determining the presence of statutory subject matter but rather, statutory subject matter should be based on whether the operation produces a "useful, concrete and tangible result". See State Street Bank & Trust Co. at 1374. Furthermore, the court found that there was no "business method exception" since the court decisions that purported to

Art Unit: 3623

create such exceptions were based on novelty or lack of enablement issues and not on statutory grounds. Therefore, the court held that "[w]hether the patent's claims are too broad to be patentable is not to be judged under 101, but rather under §§102, 103 and 112." See State Street Bank & Trust Co. at 1377. Both of these analysis goes towards whether the claimed invention is non-statutory because of the presence of an abstract idea. Indeed, State Street abolished the Freeman-Walter-Abele test used in Toma. However, State Street never addressed the second part of the analysis, i.e., the "technological arts" test established in Toma because the invention in State Street (i.e., a computerized system for determining the year-end income, expense, and capital gain or loss for the portfolio) was already determined to be within the technological arts under the Toma test. This dichotomy has been recently acknowledged by the Board of Patent Appeals and Interferences (BPAI) in affirming a §101 rejection finding the claimed invention to be non-statutory. See Ex parte Bowman, 61 USPQ2d (BNA) 1669 (BdPatApp&Int 2001).

In the present application, claims 1-7 have no connection to the technological arts. None of the steps indicate any connection to a computer or technology. Example: claim 1 recites process steps "providing..., selecting..., gathering..., calculating..., identifying... creating..., applying..., " can be broadly interpreted as being manually performed.

Therefore, claim 1 is rendered outside the technological art and therefore is rendered non statutory under 35 U.S.C. §101 guidelines. Independent claim 11 is similarly analyzed.

Claim 1 can overcome the 35 USC 101 rejection if amended to recite a computerimplemented method and using said computer to perform the claimed steps above.

Art Unit: 3623

Page 7

Claims 2-8 depend on independent claim 1; and are similarly rejected.

Conclusion

- The prior art made of record and not relied upon is considered pertinent to applicant's 8. disclosure.
- Frost (U.S. Patent No. 5,041,972) discloses performing marketing research which a. involve measuring and evaluating the responses of consumers or of the relevant audience to consumer products or other items which are to be marketed or presented to the audience.
- Chou (U.S. Patent No. 6,061,658) discloses a computer implemented process that b. applies data mining techniques to databases containing data records representing customer and overall market populations for the purpose of selecting market segments and prospective customers for targeted marketing.
- Schultz (U.S. Patent No. 6,233,564) discloses obtaining marketing data from consumers particularly using a number of data gathering methods and apparatuses and storing the data in a common database for subsequent access and use in targeting consumers.
- Verba (U.S. Patent No. 6,236,977) discloses a marketing system also includes a d. prediction engine that accesses the data structures to issue predictions based on historical data.
- Database Marketing discloses a marketing system for gathering relevant customer e. data to improve profits.
- Claytom (How to Handle Product Evaluation Procedure) teaches a gathering f. customer data and calculating a profitability index.
- Tyler "Can my company profit from database marketing?) teaches database g. marketing system for collecting customer data.

Art Unit: 3623

Page 8

h. (Database Marketing Expand Profitability) discloses a Data marketing tool for providing a system approach to attacking existing customer.

i. Jones et al (Wo9922328) discloses a method of targeted marketing to consumers.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Romain Jeanty whose telephone number is (703) 308-9585. The examiner can normally be reached on Mon-Thurs 7:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tariq R Hafiz can be reached on (703) 305-9643. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
